

Would You Like A Beautiful Shoreline? We Can Help!

Have you noticed the beautiful shorelines around Lac La Belle? Some of those beauties are LLBMD Shoreland Restoration projects! There are many benefits to being part of the LLBMD Shoreland Restoration program in addition to making your shoreline beautiful with native plants. Shoreland restoration projects provide a transition buffer zone between the lawn and the lake by using native vegetation to filter phosphorus and sediment prior to entering the lake. This helps buffer wave action that erodes shorelines and provides natural screening and privacy to landowners, as well as deterring waterfowl from coming onto the lake shore. Songbirds, reptiles and other lakeshore animals benefit from the beautiful habitat too! Shoreland restoration

is a simple natural way to enhance your shoreline and improve lake water quality. If you are interested in participating, please consider whether you would be able to meet the following conditions:

- Property must have visible and accessible water frontage on Lac La Belle
- Restoration site of ~800 square feet
- ~8 feet deep buffer planting zone
- Planted with 100% native Wisconsin species
- Agree to terms/agreement
- LLBMD will reimburse participants 75% of the project cost, up to \$2,500.

If you are interested in the program, please submit the form below before **June 1, 2022**. A LLBMD Commissioner will contact you to complete the necessary paperwork to proceed. Paperwork covers design and site preparation, planting, annual maintenance and a commitment to maintain the shoreline for five years.

I am interested in learning more! Please send me additional information.
